

A real position where thinking longer changed the move

Move 123, Black to play

What each rung of the ladder saw

Visits	Engine's move	Search says (winrate)	Independent check	Stopper: stake / cost	Decision
50	A J15	37.7%	11.0%	10.2 x λ	keep thinking
200	A J15	43.5%	11.0%	5.6 x λ	keep thinking
800	B G14	69.0%	61.6%	0.2 x λ	stop and play
3,200	B G14	53.9%	61.6%	last rung	play

A is what a fixed 200-visit search plays. An independent 1,600-visit search of each move puts B 50.6 points of winrate ahead of A. The stopper's stake estimate stayed above its threshold λ at 50 and at 200 visits, so Mikiri went on to 800 and found B.
